GOLD CERTIFIED
Partner

“Mission Critical” Training

Training and continued education are essential to the success of every organization in the world. However, educating employees can be expensive, time-consuming, and burdensome. With LearningServer for SharePoint, IntraLearn Software Corporation (ISC) has helped alleviate the difficulties associated with training by utilizing the power of eLearning. Now, all members of your organization can efficiently receive requisite training at any time / any place. By allowing employees to conveniently fit learning into their existing schedule, periodic training instantly becomes part of the organizational culture.

eLearning Within SharePoint

LearningServer for SharePoint is a tightly coupled SharePoint application that operates as part of a SharePoint installation. SharePoint’s integrated security and management provides a highly scalable platform to incrementally add learning features as required. Integrated Web Services provide interoperability with existing Learning Management and HR systems.

Target, Track, and Manage Learning

LearningServer for SharePoint is a highly scalable and customizable eLearning software application used to launch, track, and manage interactive eLearning courses. For example, employees can access corporate policy, software application, or sales training by simply logging on, registering for courses, and launching the module. Customers or partners can log on for product training, maintenance, or troubleshooting guidance. Exportable reports detail user progress, grades, courses enrolled, time spent taking courses, and more to assist supervisors and managers in tracking training compliance.

Instant-On Content

LearningServer for SharePoint can be installed and fully functional within a few hours. Popular third-party courseware can be immediately imported, launched, and tracked within the application. Industry-standard SCORM and AICC-compliant content allows employees to dramatically reduce the time needed to create and deliver critical training. In addition, content from Microsoft Office products can be easily created and converted into effective and measurable training.

Add Functionality When Needed

With LearningServer Collections, organizations can add additional functionality on an “as-needed” basis to shape the application as they see fit. Each collection offers feature-rich capabilities such as discussion forums, chat, blogs / podcast, course assembler, tests/assessments, job grouping, learning paths, and portal manager. The ability to purchase only the necessary functionality for the organization avoids excess spending on unused features.

The Company

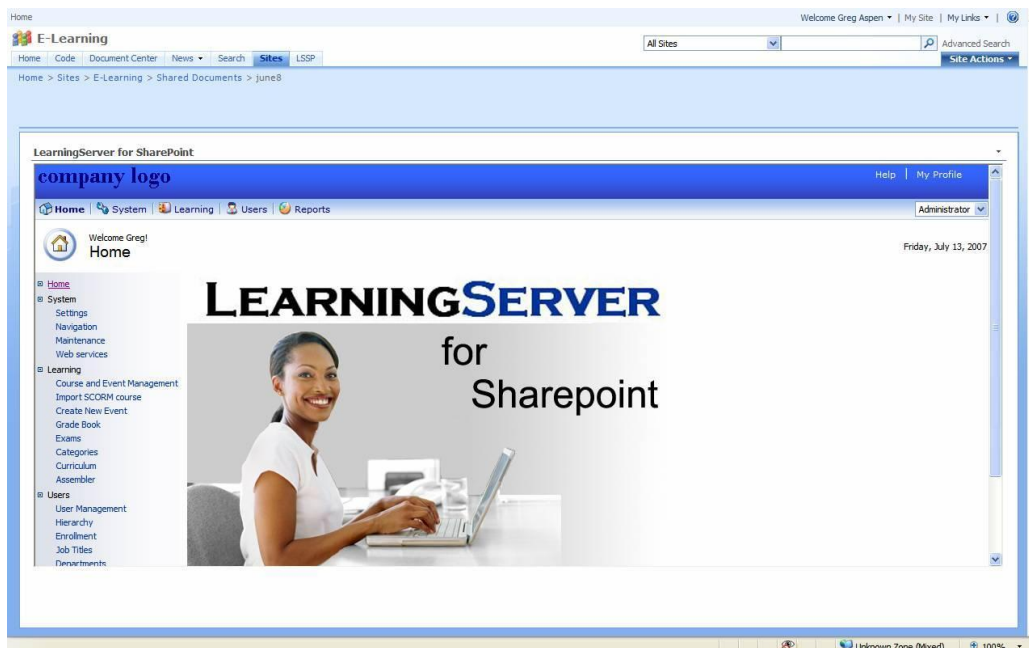

IntraLearn Software Corporation of Northboro, MA is a leading provider of Microsoft technology-based configurable turnkey e-Learning software applications for corporate enterprises, academic institutions and not-for-profit organizations. ISC’s software is distributed worldwide through authorized resellers and hosting / Application Service Providers to more than 2,000 major organizations in 45 countries and 17 languages. IntraLearn Software is in its sixth year as a Microsoft Gold Certified Partner.

LEARNINGSERVER for SharePoint

Built-in capabilities, functions, and roles within LearningServer for SharePoint:

Administrator and Instructor

- Auto Install** Transparently installs into existing SharePoint requirements. No incremental technology required.
- Manage Learning** Launch & Track imported third-party and self-authored SCORM and AICC compliant courses as well as manage a variety of learning events...both online and live.
- Customization** Graphics, words, and the entire language set, along with Cascading Style Sheets, can be edited to match an organization's desired look & feel.
- Web Services** Integrated Web Services enables tight data synchronization and integration with existing ERP, Learning Management, or HR systems.
- Increased Efficiency** Immediately assign courses to those who need critical training; easily provide training for internal use, partners, and customers. Examples include process and safety training for manufacturing, technical training for support staff, corporate policies for managers, customer product training, etc.
- Reporting** Built-in reports are available for managers to view course status, performance, grading and more for whomever they have been assigned access.
- Selectable Languages** Individual learners can select a preferred language in which to view the site.
- Courses / Events** Learners are presented with a list of courses and events to choose from or assigned to them by an instructor.
- Users Roles** Assign users as a learner, instructor, supervisor, or administrator.
